FOREWORD

(to the Third Edition)

THE Universal Decimal Classification (U.D.C.), originally derived from the Dewey Decimal Classification (D.C.), has been, and is still being, extended for use in classifying articles in periodicals, monographs and documents of all kinds, under the auspices of the Fédération Internationale de Documentation (F.I.D.), which authorizes publication of various international editions in different languages (*see end flyleaf*).

The preparation of the full English edition, parts of which have been already published as B.S. 1000, was originally undertaken by the British Standards Institution at the joint request of the British Society for International Bibliography (B.S.I.B.) and the Association of Special Libraries and Information Bureaux (A.S.L.I.B.), now amalgamated in Aslib. It is the fourth full international edition and has the approval of the Lake Placid Club Education Foundation, New York, the body responsible for the Dewey Decimal Classification.

The abridged edition B.S. 1000A was first published in 1948 in response to a widespread demand for a comprehensive short edition in English, suitable as an introduction to the use of the full schedules and as a manual for classifying books and general documents in libraries, for which the full schedules are unnecessarily detailed. It was based on the official Dutch abridgment, fifth edition (1946), and owed much to the abridgment published in English by H.M. Stationery Office under the title "Classification for Works in Pure and Applied Science in the Science Museum Library," third edition (1936).

In the radically revised second edition of 1957, account was taken of amendments internationally approved and authorized by the F.I.D. up to 1955, and the tables corresponded closely to the English text of the Trilingual Abridged Edition B.S. 1000B: 1958, the international standard abridged edition of the U.D.C. The alphabetical index contained over 20,000 entries, as against 2,000 in the first edition, while the terminology was revised throughout. Members of the British U.D.C. Committee, together with interested specialists too numerous to mention, gave freely of their expert advice and criticism, and the British Standards Institution takes this opportunity of expressing its indebtedness to them and also to the many users all over the world who have made suggestions for improving the schedules and the terminology.

This third edition takes account of the amendments listed in "Extensions and Corrections to the U.D.C." (*see* p. 254, E) during the four years 1956–59 inclusive, and a few further changes in 1960 (up to P-note 700). An outline of new numbers introduced since the second edition is given opposite, while cancellations again appear in the text in small type with marginal asterisks and relocation references and, for those made since the second edition, the year of cancellation in square brackets.

Note on the Dewey Decimal Classification and the U.D.C.

The Decimal Classification (D.C.), first published in 1876, was designed not only for the arrangement and indexing of books on shelves, but also of cards in catalogues, clippings, MSS. notes—in fact, of literary material in any form. The first edition had only 1,000 headings, but it and later editions displayed in their structure many original features, all of which were to contribute greatly to the success of the U.D.C.

The author, Melvil Dewey, described his system as being in essence a Subject Classification and a Relative Index. He regarded the latter as the most important feature, claiming that it solved the great difficulty of classified catalogues, i.e. knowing just where to put or where to look for a particular subject. This was done by displaying clearly, in an alphabetical index, the relative aspects of each topic—aspects which were scattered in the classification according to their context, e.g. sugar in agriculture, in chemical technology, in cookery, etc. But whilst Dewey showed considerable insight in thus recognizing that the alphabetical relative index is a vital part of a classification, it is the structure of his subject classification which is of greatest interest to users of the U.D.C.

The general pattern of the D.C. is as follows: The whole field of knowledge is divided into 9 main classes, numbered 100/900 (U.D.C. classes 1/9), general works constituting a tenth class, 000. Each main class is divided into 9 subclasses, e.g. class 300 (Social Sciences) into 310/390 (U.D.C. 31/39). General works on the Social Sciences constitute a tenth subclass, divided into 301/309 according to the form in which the general subject is presented, e.g. 304 Essays. Each subclass is divided into 9 further subclasses, e.g. 320 (Political Science) into 321/329, general works constituting a tenth subclass, divided into 320.1/320.9. This division into ten may be continued indefinitely—hence “decimal classification”.

U.D.C. users will note that the first 100 classes in the D.C. (000, 010 ... 100 ... 990) all have a terminal zero, thus maintaining a 3-figure minimum: it has no ordinal significance.

The use of the decimal notation has been one of the most successful features of the D.C., offering infinite hospitality to new subjects whilst using the best known and simplest of symbols—Arabic numerals. It was these two factors, and the fact that the D.C. was a classification of subjects, independent of language or race, that chiefly determined the adoption of the D.C. by the Institut International de Bibliographie (I.I.B.) in 1895. Hence, the order of subjects in the D.C. and U.D.C. schedules is substantially the same.

But the D.C. introduced, in conjunction with its decimal notation, two other structural features which have been immensely significant in the development of the U.D.C.:

1. **The synthetic principle**, whereby recurrent series of concepts are arranged in consistent orders and allocated a consistent notation. For example, in class 400 (Philology) the order of subclasses within each language is the same—Orthography, Etymology, etc., and the notation representing them is also the same, e.g. 425 English grammar, 435 German grammar, etc.). The geographical order of countries and their divisions is likewise consistent wherever it is used, e.g. 942 British history, 943 German history, 328.42 British Legislation, 328.43 German Legislation.

This synthetic principle clearly results in a mnemonic quality; but more important, it greatly increases the scheme's possible range of subdivision with no extra cost in printing the schedules. So more than 200 different languages can be subdivided in detail equal to that provided for the English Language, simply by printing the instructions “Divide like 420, English”.

Three fundamental features of the U.D.C. may be directly traced to the early synthetic/mnemonic devices of the D.C.

(i) The Common Auxiliaries are clearly an extension of the idea underlying Dewey's Geographic and Form Divisions—i.e. series of divisions recurrent throughout the whole field of knowledge.

(ii) The Special Auxiliaries are clearly an extension of Dewey's idea of series recurrent within a particular subject—e.g. the linguistic divisions under each language.

(iii) The linking together of main class numbers by means of the : (colon) was foreshadowed by certain of the “Divide like...” devices in the D.C., particularly the instruction “Divide like the main classification” which appears at 016 (Subject Bibliographies), at 331.281 (Wages in particular industries) in other places.

2. **The use of a distinctive symbol to introduce a particular principle of division.** For example, the appearance of a zero in a D.C. number usually means that the subject represented by the preceding digits is now divided by the principle “Form of presentation”; so 677.05 means the subject Textile Manufacture 677 presented in the form of a periodical, 05. Similarly, a zero following a geographic number nearly always introduces a period of that place's history. A class number so constructed is more flexible than a simple decimal number in that it may be expanded at more than one point. For example, a Directory of Wool Manufactures is 677.31058, where both the subject (Textiles 677) and the Form Division (Periodicals 05) have been subdivided independently of each other. If the form Divisions were not introduced by a 0 but were added directly, e.g. .5 instead of .05, further division of 677 into types of textile would be blocked.

The great flexibility of the U.D.C. in its use of the Auxiliary numbers is a direct result of applying this same principle. But where Dewey restricted his notation to Arabic numerals, U.D.C. uses other distinctive symbols to introduce various auxiliaries. So 677(05) (Periodicals) Textiles is similarly expandable to 677.31(058) Wool (directories). This use of distinctive symbols enables U.D.C. to extend the use of the principle considerably; so where D.C. has 822 (English Drama), U.D.C. has 820-2, the recurrent concept “Drama” being now introduced by a hyphen. As a result, whilst the order of division in the Literature class in the D.C. can only be Literature—Language—Form—Period—Author (e.g. 822.33 Literature—English—Drama—Elizabethan—Shakespeare), in U.D.C. it could be varied, since the numbers for Forms and Periods (and Languages too, if necessary) are distinctively symbolized, e.g. 820-2 “1558/1625” (Shakespeare) or 820“155” (Shakespeare) or 820 (Shakespeare) or even 8-2=20 (Shakespeare).

It should be clearly understood that “decimal classification” refers essentially to the structure of the notation, since it is theoretically absurd, as Dewey stated, to divide each class into just nine subclasses. This means that the “expressiveness” of the notation in reflecting co-ordination and subordination is often sacrificed. If more than 9 subclasses have to be accommodated, some must “share” a number, e.g. 941 (Scotland) and 941.5 (Ireland); if less than 9 subclasses are required, they are spread over the 9 numbers, thereby shortening the length of the class number—e.g. 592/595 Invertebrates.

Two distinctive modifications of the D.C. pattern by U.D.C. may be noted. Firstly, as an international scheme, U.D.C. removes the occasional American emphasis found in the D.C. notation—e.g. at 329 (Political Parties). Division of any subject by place finds all countries equally provided for. Secondly, whilst U.D.C., like D.C., is a general classification, not a composite of special classifications, the U.D.C. does provide, via its Points-of-view numbers, a mechanism whereby the structure of the general scheme may be adjusted to the needs of a special classification.

General Introduction

The Universal Decimal Classification (U.D.C.) is a scheme for classifying the whole field of knowledge. It can be applied both to the literature which records knowledge, and to the catalogues, indexes, etc., which refer to the literature. It enables these to be arranged in such a way that all references to information on a particular subject can be brought together and the information located with the minimum of searching.

Derived some 50 years ago from the Dewey Decimal Classification, the system has been steadily amplified and modified to cope with the ever-increasing output of recorded knowledge in all its branches and forms, but most particularly in the fields of science and technology. It has become widely accepted internationally as a standard system, and is now used in many thousands of libraries and information services (for subject cataloguing or indexing, filing and shelving), in periodicals (for classifying articles or abstracts), and in countless bibliographies and reference lists (for grouping individual items by subject).

The U.D.C. is particularly valuable where exchangeability of references is required, as in the joint issue of abstracts or information bulletins by a group of technical organizations, or the distribution of classified index cards through a specialized international centre. Because it is so widely adopted, previous experience of its use is a real asset, especially when new classifiers are appointed or the need arises to train new filing staff. Its standard international notation, not dependent on any one alphabet or tongue, helps to minimize language difficulties in international communication, and may even provide a suitable basis for comparative terminology in technical vocabularies, glossaries, etc.

The very universality of the U.D.C. is a challenge to the basic conception of all private "specialist" classifications. Instead of isolating a particular subject from all other specialized fields which, no matter how important, are relegated to subsidiary "Miscellaneous..." or "Other..." headings, there is a serious attempt to recognize each subject in its own right, and the specialist is led from his own (often narrow) interest to the broader implications in related fields.

In what follows, an attempt is made to outline the history and availability of the U.D.C.; the organization necessary for its development and revision; its principles, structure and notation; and to provide a few general notes on the use of the Main and Auxiliary tables.

A. HISTORY AND AVAILABILITY

The idea of using a decimal notation for the subdivisions of a library classification originated with Melvil Dewey who, after developing and trying out his system for several years in the library of Amherst College, Mass. (U.S.A.), published the first edition of 24 pages, including index, in 1876. The value of the classification was soon recognized, and its use extended rapidly, first throughout the United States and then to the United Kingdom and many parts of the British Commonwealth.

In 1895, following the first International Conference on Bibliography, the newly founded Institut International de Bibliographie (I.I.B.) sponsored a scheme initiated by two Belgian enthusiasts, Paul Otlet and Henri La Fontaine, for the establishment of a comprehensive classified index to all published information. By arrangement with Melvil Dewey, who had just published the 5th edition of his Decimal Classification (still no more than a few thousand subdivisions), the I.I.B. began expanding the schedules part by part, and in 1905 published (in French) the first complete

international edition of what was later called the Classification Décimale Universelle. Comprising some 33,000 subdivisions with an alphabetical index of 38,000 entries, this was given the title "Manuel du Répertoire Bibliographique Universel" because it provided the basic classification schedules for the great card subject-index then being compiled in Brussels.

In following years, the schedules were slowly extended, but the First World War interrupted the activity of the I.I.B., and it was not until the mid-twenties that work on the 2nd edition was effectively resumed. The I.I.B. was reorganized and its Secretariat established at Deventer in Holland, but in 1931 its name was changed to "Institut International de Documentation" (I.I.D.) and its headquarters were transferred to The Hague, which is still the international U.D.C. centre. By 1937, when the "Institut" assumed the present name of "Fédération Internationale de Documentation" (F.I.D.), work had also begun on the German and English editions.

The preparation of the 2nd international edition involved some forty specialists, under the general editorship of Otlet and La Fontaine, who were concerned chiefly with the Humanities, and Mr. F. Donker Duyvis (later General Secretary of the F.I.D.), who was responsible for most of the sections on Science and Technology. Containing some 70,000 subdivisions, this 2nd edition in French was published during the years 1927-33 under the title of "Classification Décimale Universelle" and has since served as the authoritative basis for all subsequent schedules, full and abridged, of which a survey is given at the end of this volume.

Of the three full international editions based on the 2nd edition, the only one completed since the end of the Second World War is the 3rd (German) edition, comprising 7 volumes of tables and a 3-volume alphabetical index. The 4th (English) edition is still in preparation, and the only sections so far published are 0, 5, parts of 62 and 67, 669, and 69. Rather more has appeared of the 5th edition (again in French): namely 0, 2, 3, 61, 62 and 65, but difficulties are being encountered and progress is slow. Other editions in Japanese and in Spanish have been begun, and one in Portuguese is contemplated.

Abridged editions have been published in Czech, Dutch, English, Finnish, German, Japanese, Polish, Spanish, Swedish and other languages, while Arabic and Portuguese editions are in preparation. Only a very brief outline schedule exists in French, but a standard abridged text is included in the important new 3-language edition issued jointly by the Deutscher Normenausschuss (D.N.A.) and the British Standards Institution (B.S.I.), with the Association Belge de Documentation (A.B.D.) and the Union Française des Organismes de Documentation (U.F.O.D.).

Special "selection" or "excerpt" schedules have recently appeared: notably, one for Architects, Builders and Civil engineers (A.B.C.), and a German "Fachausgabe" for "Measurement, testing, control and protection". Similar editions for other specialized fields are in preparation or contemplated.

B. DEVELOPMENT AND REVISION

The development and maintenance of a system as comprehensive and widely used as the U.D.C. could hardly have been achieved without some form of effective supervision and control. The ultimate authority on general U.D.C. policy and development is the International Committee on Universal Classification, on which all national member committees of the F.I.D. are entitled to be represented, but its

membership is too diffuse to maintain continuity between F.I.D. Conferences. Day-to-day control and supervision are vested in the more compact Central Classification Committee (C.C.C.), which consists of the F.I.D. General Secretary and the editors of the full U.D.C. editions (German, English, French, Japanese, Spanish) *ex officio*. These editors are in close and constant touch with the F.I.D. General Secretariat at The Hague, where an up-to-the-minute master copy of the complete U.D.C. is maintained, based on proposals submitted by U.D.C. revision committees or individuals in many parts of the world.

In revision, conflicting tendencies are inevitable: the older established users, having built up extensive U.D.C. catalogues over the years, tend to resist changes, whilst the newer and prospective ones, with little or no existing U.D.C.-classified material, are often anxious for drastic rearrangement, sometimes in the interests of logic alone. However, the majority of those active in U.D.C. revision have accepted a policy of compromise: they endeavour to make the classification better for established users, and more attractive to non-users; to reduce confusions and shortcomings, and to introduce new concepts without disturbing the existing tables too much.

The governing rule in all U.D.C. revision work is that the significance of a particular number may be extended or restricted, but may not be completely altered. If a U.D.C. number (with any subdivisions) is obsolete, it may be "cancelled", which means that its use is no longer authorized because a better or more up-to-date arrangement has been developed under another number, often a "free" (unused) number. Eventually, the cancelled number becomes "free" (by disuse) and may then be authorized with a completely different significance, but only after a period of 10 years, which is considered the minimum necessary to enable current users to readjust their files and to avoid widespread confusion of the older and newer meanings. This policy undoubtedly slows down revision, but probably creates least dissatisfaction, especially when applied with discretion and some degree of flexibility.

C. PRINCIPLES

Three basic principles are evident in the Universal Decimal Classification:—

1. It is a *classification* in the strictest sense, depending on the analysis of idea content, so that related concepts and groups of concepts are brought together, and the arbitrary and often haphazard systematization of alphabetical and other arrangements is avoided.

2. It is a *universal classification* in that an attempt is made to include in it every field of knowledge, not as a patchwork of isolated, self-sufficient specialist groupings, but as an integrated pattern of correlated subjects. This universality at the conceptual level is supported by notational devices, which permit the linking of simple main numbers (for simple ideas) either with other main numbers or with auxiliaries denoting Place, Time and similar commonly recurring categories—in each case forming combined or compound numbers. If separate index entries are made under each single main number forming part of a combined number, the complex subject can be located from each point of view, regardless of any subjective approach on the part of the classifier.

3. It is a *universal decimal classification*, constructed on the principle of proceeding from the general to the more particular by the (arbitrary) division of the whole of human knowledge into ten main branches, each further subdivided decimally to the required degree. This principle can be applied to any notation, but Arabic numerals are inter-

nationally familiar in a recognized order, whereas letters and other symbols are not.

The U.D.C. is essentially a practical system for numerically coding information, so designed that any item, once coded and filed correctly, can be readily found from whatever angle it is sought. It should not be regarded as a philosophical classification of knowledge, nor is the order of subjects of primary importance. What is of greater moment to a scientific classification is that the introduction of an auxiliary apparatus of connection and relation signs, lacking in the original Dewey system, has made the U.D.C. really universal, in the sense that it permits almost any desired combination and modification of basic numbers to denote the most complex subjects. (See D 2 and F.)

D.1. STRUCTURE. NOTATION

The whole field of human knowledge, regarded as unity, is divided into ten main branches denoted by decimal fractions as follows:—

- .0 Generalities: methodology, documentation, scripts; recording, collection and dissemination of information
- .1 Philosophy, metaphysics, logic, ethics. Psychology
- .2 Religion. Theology
- .3 Social sciences: including statistics, law, education
- .4 Philology. Languages
- .5 Pure science, mathematical and natural
- .6 Applied science: medicine and technology
- .7 The Arts, including architecture, photography, entertainment and sport
- .8 Literature
- .9 Geography. Biography. History

On this foundation, the notation is built up by continuous extension of the decimal fractions, on the principle of proceeding from the general to the particular. Thus, every concept within the domain of pure science is represented by a decimal fraction greater than .5 and less than .6, the subdivision being carried to any required degree, as shown by the following example:

- .5 Pure science, mathematical and natural
- .51 Mathematics
- .52 Astronomy, geodesy
- .53 Physics, with mechanics
- .531 Mechanics (of solid bodies)
- .531 7 Measurement of geometrical and mechanical magnitudes
- .531 71 Measurement of length, linear dimensions
- .532 Fluid mechanics
- etc. etc.

For convenience, the initial decimal point is omitted, though it is the fact that all U.D.C. numbers are in reality decimal fractions less than unity that determines the sequence of numbers, which otherwise would seem chaotic. On the other hand, purely as a visual aid, "points" are inserted usually after every third figure. Thus, in the example above, the numbers .53 onwards are written 53, 531, 531.7, 531.71, etc., and so they are given throughout the main tables. Only when introducing the .00 and .0 auxiliaries [see Tables (i) and (k)], or for some specific mnemonic purpose, such as the parallel division of 91 and the (4) to (9) auxiliaries, e.g. 91.44 Geography of France, is the position of the point varied. Generally, however, any such deviation from the usual triple-figure pattern does not affect the filing order of the numbers.

Logical classification seldom requires regular step-by-step subdivision into ten. Usually, there are fewer than ten subdivisions, and a number of places are left "free" for possible future use. On the rare occasions when more than ten are

needed, centesimal (instead of decimal) division is resorted to, e.g. under 354 Ministries; or, to shorten notation, a single subject may be spread over several divisions, e.g. 596/599 Vertebrates.

From the foregoing brief outline of the notational structure of the main U.D.C. tables, it will be clear that every subject, however long its number, is included (by implication) in a parent number, so that the degree of precision in classifying may be adjusted to the needs of the individual user. Thus, to continue the example already mentioned, a user with a collection of books mainly on literature and the arts (U.D.C. 7 and 8) might find the number 53 (or even 5) adequate, whereas one with more special interest in Physics and the natural sciences might have to assign the full number 531.7, for a book on "Mechanical Measuring Devices", or at least 531, to differentiate his group of books on Mechanics from others on Optics or other branches of Physics.

The continuous step-by-step extension by decimal subdivision is clearly shown in the full-page Example (p. 8) in which one particular branch of Applied Science, 6, is followed through 62, 621, 621.3 to the 5th figure.

D.2. AUXILIARY NOTATION

In practice, the subject-matter or content of a document is not always so simple and clear-cut, and may require more than a simple decimal number for easy retrieval by users with different approaches. The subject-matter may be:

(a) A complex fusion of two or more independently classifiable concepts, denoted by linking the appropriate main numbers by the : (colon) sign for relationship, e.g.

Heat treatment of steel	621.785:669.14
Physical basis of music	534 :781

(b) A detailed element, attribute or aspect of any main subject denotable by a simple main decimal number and not normally classifiable without reference to that number, e.g.

Architectural styles	72.03
Steel strips	669.14-418
Rubber research	678.001.5
Shipbuilding in England	629.12(42)

In classification schemes designed for specialists in particular fields, such common concepts as "styles", "strips" and "research" may be given arbitrary subdivisions under the appropriate heads, but in a comprehensive general system designed to cover the whole of knowledge, or a large part of it, this would mean endless repetition and sheer waste of paper and print.

In the U.D.C., the problem is solved by the provision of an Auxiliary notation of special signs and numbers, listed in one set of tables (a) to (k) but applicable as needed to all parts of the main tables. These serve to distinguish, not only the finer details and complexities of the subject-matter or content of a document, but also the language or other form in which it is presented. They should only be used when the main tables are inadequate.

The use of Auxiliaries (and compound numbers) is briefly outlined in the last section of this Introduction (F), and further explanations and directives are given with the abridged lists in the Auxiliary tables which immediately follow it.

A schematic representation may give a clearer view:

NOTES ON USING THE U.D.C.

Classification is something of an art, and proficiency in it depends as much on a general background knowledge of the subject-matter to be classified as on a broad grasp of the principles and notation of the system in use. For a scheme as comprehensive and flexible as the U.D.C., it is almost impossible to lay down any rigid rules, and all that is here attempted is to offer a few general hints on how to set about classifying in such a way as to render the contents of books, periodicals and other documents most accessible to those in search of information.

1. **Start by assessing the needs of the potential users:** what range of information will be looked for, and from what points of view, and what additional sources are likely to be acquired as time goes on. Always keep these points in mind when assigning U.D.C. numbers to individual documents.

2. **Faced with large numbers of documents, try to sort them** into manageable piles according to very broad subject groups, perhaps reserving a special pile for the more "difficult" ones which do not obviously fall into any of these groups and therefore need more careful consideration.

3. **For papers already classified, check U.D.C. numbering** to ensure that it is compatible with personal practice. The original classifier may have been content with much broader numbering than is now required, or may have had in mind a different group of readers or users.

4. **In determining the subject, never rely on the title alone.** Glance inside every document, look through the synopsis or contents list and, if necessary, rapidly scan the text. Even the most lucid and apparently explanatory title may not convey some aspect or feature vital for the particular users in question.

5. **To determine the U.D.C. number(s), never rely on the printed index alone:** always verify in the systematic tables. The alphabetical index is an invaluable preliminary aid, but for correct and accurate placing, due regard must be paid to the broad headings and cognate subdivisions in the tables themselves.

6. **Avoid classifying too minutely, unless expecting a rapid growth in the collection.** Over-detailed subdivision is uneconomical: it means longer numbers, and may needlessly segregate items in an already compact group, when they might be better arranged by dates of publication or by names of authors or by a combination of both.

7. **Do not hesitate to assign two or more U.D.C. numbers** if the document presents several distinct subjects or aspects of a subject, and use the : (colon) freely to link related concepts. Avoid the other connecting signs + and / wherever possible: filing and retrieval are simpler and quicker if separate entries are made for each U.D.C. number assigned.

8. **If two or more U.D.C. numbers seem equally applicable to a subject,** choose the one which corresponds most closely to the users' requirements. Where no clear choice is possible, assign the number first in U.D.C. numerical sequence, or enter also under the alternative number(s).

9. **For permanent collections, build up a detailed alphabetical subject-index** in conjunction with the main classified catalogue. Maintain it regularly, checking for accuracy and completeness as each item is assigned its U.D.C. number, and use it to display subsidiary aspects of all main headings (as suggested in F1). At the same time make duplicate cards or slips, arranging them in classified order to show what subject headings have already been allocated to the U.D.C. numbers used.

10. **To maintain a well-adjusted, up-to-date classified file,** check it periodically against the authorized "Extensions and Corrections to the U.D.C."—if possible, every 6 months as issued, but at least every three years when the last issue (No. 6) of each series appears.

F. USE OF AUXILIARIES AND COMPOUND NUMBERS

Auxiliaries are a means of eliminating repetition in all parts of the printed main tables, in that they group certain recurring and generally subordinate concepts, such as Language, Form, Place, Time and Point of View—cf. Tables (c) to (i). They do not stand alone, but are attached to main U.D.C. numbers denoting primary subject-matter.

An auxiliary should not be used for a concept which can be denoted by a simple main number, or by two such numbers linked by colon : (sign of relation). For example, a document on "African Rivers" should not be classified 916(282) or 551.482(6), when 916:551.482 will ensure that it is indexed under both Geography of Africa and Hydrography of rivers. One on "River life (plants, animals)", however, is adequately classified 577.47(282), since the information is clearly ecological and not hydrographic.

In practice it will be found that it is seldom necessary to use more than one auxiliary, unless very minute subdivision is required: usually, colon linkage and the (...) series will suffice. Choice and order are dealt with at the end of this section F.

1. Special auxiliary subdivisions and "hiding" information

In many sections of the main tables, it is found convenient to provide more specialized subdivisions: each series specific to a particular subject or its related fields where indicated. These can serve as fixed main numbers when used as they stand (attached to the base-number), or they may be detached and added to any of its direct decimal divisions, if regarded as subordinate, e.g.

677	Textiles industry
.052	Spinning machines (in general)
677.21	Cotton industry
.052	Cotton-spinning machines

A concept which seems subordinate to one group of specialists, however, may be of primary importance to another. It follows that the use of .0 and -... subdivisions, detached from the fixed base-number and scattered under its various subdivisions, may easily lead to the "hiding" of concepts which ought to be independently retrievable.

Thus, to follow up the example mentioned, if documents dealing with special spinning machines for flax, cotton, etc., are indexed only under the respective industries (677.11.052, 677.21.052, etc.), and not under 677.052 also, then information on Spinning machines which may be of interest to the machinery makers will be "hidden", because the special kinds of spinning machines have been treated as subordinate to the flax, cotton or other industries.

This applies especially to abstracts or other lists, in which the items are only broadly classified and the alphabetical subject index (if any) contains only the general headings.

In library catalogues, the subordinate aspects of each heading may be effectively and economically displayed in the detailed alphabetical subject-index built up by the classifier for the particular collection: in the example quoted, there will be no real need for second entries under 677.052, since the scattered information will be brought together in the alphabetical index as follows:

Spinning machines	677.052
cotton	677.21.052
flax	677.11.052
wool	677.3.052

2. Reversal of component parts of compound U.D.C. numbers

It may be desirable, in a file or list, to be able to find quickly all available information relating to, say, a particular

country or region, or some special date or period, or even all documents issued in a certain form or a certain language. Where punched cards or other mechanical selection systems are not in use, such information can readily be brought together by reversing the normal order of main number and auxiliary and making duplicate entry under the auxiliary.

Thus, Mining in Belgium 622(493) may also be written (493)622 for insertion in a duplicate file of (1/9) numbers, in which each country or regional division will be subdivided by the main U.D.C. numbers corresponding to the whole range of its social, industrial, cultural and other activities.

To avoid having to type the full entries separately for the two or more cards required (simply to secure the correct U.D.C. number order on each), the cards may be prepared in one operation, all exactly alike, and the appropriate part of the compound number underlined on each card, e.g.

622(493) for filing under 622, and

622(493) for filing under (493).

The same practice may also be followed with colon-linked numbers, and even with Special -... and .0 subdivisions detached from the normal base-number and used with direct decimal divisions of it, as explained in Table (k), part B.

3. Intercalation

Certain Common auxiliaries (Place, Time) are provided with double (open and close) signs, which lend themselves readily to intercalation, e.g.

338	Economic situation	785	Instrumental music
.5	Prices	.7	Chamber music
(42)	England	"18"	19th century
338(42)5	Prices in England	785"18"7	19th cent. chamber music

Intercalation, though permitting utmost flexibility and any desired grouping, has an individualistic quality making it more suitable for private use, and should be avoided altogether when classifying data for wider circulation or exchange.

4. Choice of suitable auxiliaries: priority, preference

As mentioned, more than one auxiliary is seldom necessary, especially when applied in conjunction with the : (colon) sign. Selection of the most suitable auxiliary depends on the requirements of the specialist user, and the choice will generally fall on the series which most restricts the scope of the subject-matter denoted by the main number. Only where further minute definition is essential should additional auxiliaries be used.

In sections of the main tables provided with Special -... or .0 or '... subdivisions, one of these will usually be the obvious choice. Where there are none, or where those mentioned are unsuitable, use may be made of one of the series of Common auxiliaries, of which the most generally helpful are the .00 Point-of-view series, and the (1/9) Place and "... Time auxiliaries. Apart from these, which relate to subject content, there are two series distinguishing the Form (0...) and Language =... in which a document may be presented.

5. Internal order of auxiliaries in a compound number

When two or more auxiliaries have to be used with a simple main number, their internal or "horizontal" order in the resulting compound number is decided by the order in which they have been selected: that is, the most significant (usually the most restrictive) first. Although "significance" may vary

Typing duplicate cards for files, purely for the sake of the reversed numbers, may be avoided by using carbon replicas and underlining the appropriate component,

e.g. 17:7 for filing under 7

341:63(44:45) for filing under (44:45)

341.63(44:45) for filing under (45:44)

Practical considerations call for maximum use of this sign, and wherever doubt arises, it should be preferred to the + (plus) sign. Its significance, indeed, is not limited to a strictly co-ordinate relationship, and it may be used to separate several U.D.C. numbers which, for clarity and to avoid long combinations, may be written one below the other,

e.g. 669.1:543 Iron and steel: analysis
:546.22 Sulphur (in iron and steel)
:546.815 Lead (in iron and steel)

When the relationship involves a subordinate concept for which no separate entry is required by reversal, square brackets [], or (()) on typewriters, may be used in place of the colon

e.g. 620.174[669.14] Materials testing—bend tests (for steel)
This symbol lends itself to intercalation, thus permitting alternative grouping,

e.g. 620.1[669.14]74 Materials testing (for steel)—bend tests
but it is a refinement which may usually be dispensed with, especially in printed or other widely circulated publications, for which the : (colon) should be preferred.

(c) Common auxiliaries of Language = . . .

These serve to designate the language or linguistic form of any subject denoted by a main U.D.C. number, and are formed by substituting the = sign for the subdivisions of section 4 Linguistics (or 8 Literature). Their use is recommended only for very detailed subdivision, notably in the following circumstances:

1. Simultaneous designation of a subject by Form and Language, *e.g.*
61(03)=20 Medical encyclopaedia in English
2. To distinguish translations of specific works, *e.g.*
22.05=30 The Bible in German translation
3. When, for primary grouping by language, the appropriate auxiliary is put before the main U.D.C. number to which it refers, in which case the = sign is repeated so as clearly to demarcate the main number following, *e.g.*
=30= 05 German periodicals (i.e. in German)
=40= 08 Collected works in French

Only a few examples are included here, but the list may be extended as required in parallel with the subdivisions of section 4 (*q.v.* in the main tables):—

=00 Polyglot, multi-lingual
=088 Mixed, hybrid, *e.g.* pidgin
=20 English
=30 German
=393 Dutch, Flemish, Afrikaans
=395 Scandinavian
=40 French
=50 Italian
=60 Spanish
=71 Latin
=82 Russian
=914 Modern Indic. Hindi, Urdu, Bengali, etc.
=951 Chinese
=956 Japanese
=96 African. Bantu. Swahili, etc.

(d) Common auxiliaries of Form (0 . . .)

These serve to distinguish the form in which the subject denoted by the preceding main number is presented, *e.g.* 58(021) Comprehensive treatise, handbook of botany

(e) Common auxiliaries of Place (1/9)

These serve to indicate the geographical range of the subject denoted by the preceding main number,

e.g. 347.77(492) Dutch patent law
385(43) The German railway system

When the geographical or regional aspect is paramount, entry may be made under the auxiliary, which then precedes the main number,

e.g. (492)347.77 Netherlands, patent law
(43)385 Germany, its railway system

The closed symbol (...) lends itself to intercalation, and it is often helpful to interpose the auxiliary after the first two figures, or in another preferred position, provided the entry under the main (subject) number is retained.

Relation between, and association of, places may be expressed by means of the connection signs (Tables a and b) inside the brackets, the specifying numbers being reversible,

e.g. (43:44) Germany and (in relation to) France
(7/8) The Americas (considered together)
(41+73) Britain and (together with) America (U.S.A.)

When the listed U.D.C. auxiliaries (1/9) are unsuitable for specialist use, an established non-U.D.C. regionalization scheme may be introduced after an asterisk (within the brackets), provided that reference is made to the scheme adopted in a footnote or introduction, e.g.

598.2(42*...) British bird distribution by vice-counties (Watsonian nos.)

(g) Common Auxiliaries of Time "..."

These serve to specify date, period or other time aspects of the subject denoted by the preceding (main) number, except 571 Prehistory, in which a special series (11...) is used. For dates, the ordinary calendar reckoning notation is placed between inverted commas in the order—Year, Month, Day, *e.g.*

"1898.12.11" (11th December 1898)

"1930.06.05" (5th June 1930)

This "four-two-two" pattern makes for greater clarity in extensive arrays of cards or listed items, and reduces the risk of confusion with the "3" to "7" time concepts and of reverse interpretation of year and day, which might easily occur with the first two figures omitted. Thus, if the second example above were written "30.06.05", the date might be read as 30th June 1905. It is to maintain the "four-two-two" pattern that the nought(s) must be inserted, even for dates between the years 0 and 999, *e.g.*

"0435.08.04" (4th August, A.D. 435)

Dates before the birth of Christ (B.C.) are distinguished by prefixing the — (minus sign), *e.g.*

"—0064" (In the year 64 B.C.)

The + (plus) is prefixed only when contrasting A.D. dates or periods, in a series beginning B.C., *e.g.*

"+0090" (In the year A.D. 90)

Centuries or decades are denoted by 2- or 3-figure notations respectively, *e.g.*

"03" 4th century (the 300s)

"19" 20th century (the 1900s)

"191" Second decade (1910–19)

"193" The "thirties" (1930–39)

Periods embracing several centuries, decades or years are denoted by the initial and final figures, separated by the / sign, *e.g.*

"16/18" 17th to 19th centuries

"187/189" The "seventies", "eighties" and "nineties"

"1919/1939" The "inter-war" years (1919 to 1939)

The Common Auxiliaries of Time are used to designate date, period or other time aspects of the subject-matter or content denoted by the main U.D.C. number, and not date of publication or issue.

(h) Alphabetical and (non-decimal) Numerical Subdivision

The main U.D.C. tables, with the various Auxiliaries, serve to group subjects, but not to specify individual names or numbers. To do this, the appropriate names or initials (in brackets, if desired) and/or numerals have to be added, the latter being distinguished, where necessary, from the U.D.C. decimal numbering by a prefixed "No."

E.g. 061.5 Firms, businesses, etc.
AEG Allgemeine Elektrizitäts-Gesellschaft (General Electricity Corporation)
1 (Hegel) Hegelian philosophy

625.711(42)A4 The Great West Road
or 625.711(42*A4) (England) known as A4

or 92 Schil. Biography of Schiller
or 92 Schiller

(i) Common Auxiliaries of Point of view .00...

These .00 numbers, added to any main U.D.C. number, indicate the broader aspects of a particular subject, each of the subdivisions .001/.009 providing a distinct, but comprehensive, approach to the whole field, *e.g.*

622 Mining: industry, engineering, etc.
.001 Programme, research, development
.002 Production and technique problems
.003 Commercial and financial aspects
.005 Equipping and installation problems
.006 Pit location, accommodation, etc.
.007 Manpower and personnel problems
.008 Administration and management (of the mine)

They are never used alone, but always added to a main number, and should not be confused with the main U.D.C. divisions 001/009 (Generalities: methodology, documentation, etc.).

Any of the Common auxiliaries of Time, Place, Form and Language may be added if required, but the wider implications of each aspect are denoted by extensive coloning to other U.D.C. main numbers, *e.g.*

622.007:331.69 Shortage of labour in the mines
:331.88 Mineworkers' union organization

When there are relatively few items to be classified, direct coloning (without the .00.. numbers) may suffice: the order of the coloned numbers may not be entirely satisfactory, but the shorter notation will compensate for this. When documents or references to the literature are numerous, however, and especially if they have to be classified from a more subjective viewpoint than that permitted by the relatively objective systematization of the U.D.C. main tables, direct coloning may create an unsatisfactory, and even chaotic, order of the subdivisions, which can be avoided by judicious use of .00 numbers.

For instance, in a water engineering institution [628.1], having a large collection of documents of purely internal interest, direct coloning to main numbers would yield a somewhat haphazard arrangement, as shown in the following examples:

628.1:022.5 Public reading room
:069 Museum
:331.8 Working hours, conditions of personnel
:368.4 Workmen's insurance
:543.3 Water analysis
:659.24 Information bureau
:663.63 Water purification

This arrangement, in the natural order of the coloned main numbers, is clearly unsatisfactory, and a much better "array"

could be obtained by suitable grouping with the aid of a few .00 numbers, thus:

628.1.002: Waterworks practice, water supply, etc.
:543.3 Analysis of water supply
:663.63 Purification of water supply
.005 Equipment and installation problems
:022.5 Public reading room
:069 Museum
:659.24 Information bureau
.007 Personnel, staff problems
:331.8 Working hours, conditions
:368.4 Insurance matters

In private use, the formidable notation so created can be simplified by substituting a letter or some other conventional symbol for the full U.D.C. number for the organization (or its main subject), thus:

X.002:543.3
X.007:331.8

but this practice should not be adopted in published lists, catalogues, etc., unless the significance of the symbol is clearly stated, *e.g.* in a footnote.

(k) Special (auxiliary) Subdivisions -..., .0... and '...

A. Role and range of application. Whereas the Common auxiliaries represent subordinate ideas recurring in every field of knowledge, and each table or series, having its own distinctive sign, is applicable to all sections of the main tables, these - (hyphen), .0 and ' (apostrophe) subdivisions are more specialized in their scope, and each series is limited to use in the section for which it is designed or in related sections as indicated. This limitation is also necessary because two of the signs, (hyphen) and .0 (point 0), have to do duty for numerous distinct categories of ideas in different sections of the main tables. For instance, -3 is used in quite different senses under 54, 621 and 622, whilst .05 is used with an even greater variety of meanings under 06, 22, 331, 34, 53, 624, 654, 656 and the main divisions of 66, 67 and 7.

Of the two kinds of "analytical" subdivisions, the -... are generally more widely applicable than any .0 series in the domains of science and technology. The important series -1/-9 listed under 621, for instance, with certain exceptions noted, is extensively applied in all sections of 6 (other than 61), *e.g.*

621-4	Shape and form of materials, products, etc.
-41	Flat shapes: sheet, strip, board, etc.
-43	Solid shapes: blocks, spherical objects, etc.
669-41	Metal sheet and strip
669.3-41	Copper sheet
674-41	Timber boards, planks, etc.
691.327-43	Concrete (building) blocks

Limited in 6 chiefly to 616, but widely applicable in 3 (Social sciences) is the series -05 denoting "Persons", *e.g.*

331.64-055.2	Labour services for women
356 — 055.2	Women's auxiliary (army) corps
616.12-055.2	Heart disease in women

Less widely applicable, however, are the various series of -... subdivisions in 5 (Pure sciences), where they are developed more specifically under different sections, *e.g.* 531, 534, 535 and 54.

In the sections dealing with the Arts and Humanities, -... subdivisions are generally much less used than .0 numbers, which are often developed on a very wide scale, *e.g.*

7 .01	Art aesthetics, theory, appreciation, etc.
72 .01	Architectural aesthetics and theory
78 .01	Musical aesthetics and theory
784.01	Vocal (music) aesthetics and theory

B. Use as "main" numbers for improved retrieval of information. In so far as they represent subordinate aspects of a main subject, the Special -... and .0 subdivisions are used in the same way as the Common auxiliaries, i.e. detached from the main base-number under which they are listed, and affixed to any of its decimal subdivisions .1 to .9, as shown in the examples already given. However, they may denote important features of the main subject for which

there may be no other suitable main decimal division .1/.9, and simply to detach and scatter them under a variety of subordinate headings would be to "hide" information, which should be retrievable under one general number (*cf.* F1). In such circumstances, unless a detailed alphabetical index has been built up to provide for adequate retrieval (*cf.* E9 and F1), the Special subdivisions should be used as they stand, i.e. attached to the main number they are listed under, a second entry being made when the concept denoted by the -... or .0... refers to a specific decimal division of that main base-number. This may be done by using the : (colon) sign (*cf.* Table b) to form a compound number, the two components of which may be reversed in the usual way, *e.g.*

621-52 : 621.74	Automatic control in foundries
[621.74:621-52]	
677.052:677.21	Cotton-spinning machines
[677.21:677.052]	

Alternatively, and more accurately, the double entry may be effected by writing the two numbers (in full) one below the other, or writing only the one compound number (as for Common auxiliaries), and using some simple convention, such as underlining, to mark the parts to be juxtaposed for the second entry, *e.g.*

{ 677.052	Spinning machines
{ 677.21.052	Cotton-spinning machines
or 677.21.052	(meaning "file also under 677.052")

C. The apostrophe '... , most recent addition to U.D.C. auxiliary notation, is synthetic—not analytical—in function; in a way which is logical and clearly seen to be so, it serves to build up the compound number for a substance (or other entity) derived from two or more components by integrating the relevant "component" subdivisions with an "umbrella" base-number meaning "composition" (*e.g.* 666.113) or by accreting some secondary "component" subdivision(s) to a base-number denoting the primary component (*e.g.* 546.32).

Although it may introduce a series independently designed for a particular base-number (*e.g.* the '1/'7 subdivisions of 678.6—not detailed in this edition), the apostrophe usually replaces certain main-number figures common to each component, *e.g.* the 546 in both the '41 and '28 of 666.113 '41 '28 Lime-silica glass, or the 669 itself in the '5 and '6 of 669.35 '5 '6 Cu-Zn-Sn alloys.

When an '... series is added to a base-number which has no direct decimal division, the resulting compound numbers are filed as straightforward main-number divisions (*see* D.1., p. 6); when added to a base number which has further direct divisions, however, the '... series is filed immediately before them (*see* F.6, p. 10), *e.g.*

547.29 '26	Carboxy-acid esters
'262	Ethyl esters
.292 '26	Acetates (in general)
'262	Ethyl acetate

 531.1 **Kinematics.** Space, time, motion, velocity, acceleration
 531.2 **Statics and graphical statics**
 .21 Statical laws: force, mass
 .22 Composition and resolution of forces
 .23 Moments (of inertia, statical)
 .25 Graphic statics. Cf. 624.04
 .26 Attraction and potential. Cf. 531.51
 531.3 **Dynamics. Kinetics**
 .31 Fundamental principles (D'Alembert, Hamilton)
 .32/.33 Motion of a point. Isochronism
 .35 Motion under central forces. Cf. 521.1
 .36/.38 Rigid or solid body motions
 .39 Dynamics of material systems, etc.

- 531.4 **Work. Friction**
 .41 Work. Efficiency
 .42 Weight, mass, specific gravity, density
 Cf. 531.21; 531.75
 .43 Friction in general. Cf. 539.62
 .44 Sliding or slipping friction
 .45 Rolling friction
 .46 Combined slipping and rolling friction

531.5 Gravitation. Ballistics

- .51 Gravitation. Gravity. Cf. 528.27; 531.26
 .52 Laws of falling bodies
 .53 Pendulum theory, laws
 .55 External ballistics. Motion of projectiles
 .56 Secondary motion of projectiles in the air. Spin. Deviation. Atmospheric influences
 .57 Internal ballistics. Motion in the barrel
 .58 Target ballistics, penetration, etc.

531.6 Mechanical energy. Conservation. Impact

- .61 Energy and momentum generally
 .62 Law of the conservation of energy
 .64 Energy of space. Potential energy
 .65 Energy of motion. Kinetic energy
 .66 Collisions. Impact

531.7 Geometrical, mechanical magnitudes: measurements, etc. Cf. 389.1; 621.317; 681.2

- .08 Principles, methods of measurement. *As* 53.08
 .71 Length and linear characteristics
 .711 Standard of length. Standard metre.
 Line and end standards
 .713 Comparators, cathetometers, etc.
 .714 Mechanical precision instruments: micrometer (screw) gauges, calipers, etc.
 .715 Optical precision instruments.
 Interferometers, etc.
 .716 Less exact technical measuring instruments.
 Rules, scales, tapes, compasses, dividers
 .717 Measurement of thickness, diameter, flatness, straightness, parallelism. Spherometers.
 Screw pitches. Depth calipers
 .718 Gauges, gauging in general. Limit gauges
 .719 Other instruments for measuring length.
 Curvimeters. Measurement of distance, depth, height. Telemeters. Sounding lines
 .72 Surfaces, sections. Planimeters. Integrators
 .73 Volume of solids, liquids and gases. Standards of volume. Cf. 542.3
 .74 Angles. Protractors, goniometers, clinometers
 .75 Mass and density. Hydrometers, pycnometers.
 Cf. 542.3

- 531.76 Time intervals, velocity and acceleration. Chronographs. Cf. 529.7; 681.11
 .77 Angular velocity. Revolution counters, etc.
 .78 Force, work and pressure. Dynamometers, manometers, vacuum meters. Barometers
 .79 Other measurements. Counting and dividing
 531.8 Theory of machines. *See* rather 621.01 *et seq.*
 532 **FLUID MECHANICS. HYDROMECHANICS**
Information common to liquids and gases here
 532.1 **Hydrostatics generally**
 .12 Compressibility. Elasticity
 .13 Internal friction. Fluidity. Viscosity.
 .135 Rheology (flow of matter) Cf. 539.6
 .2 Equilibrium of liquids. Free surfaces.
 .29 Levels. Spirit-levels
 .3 Immersed and floating bodies: stability, equilibrium, buoyancy (Archimedes, etc.)
 532.5 **Hydrodynamics. Fluid motion, flow¹**
 .52 Flow through orifices. Boundary layer. Vortices. Cavitation. Mixing
 .53 Waterfalls. Weirs. Jumps
 .54 Flow through pipes. Channels
 .57 Velocity and quantity rate of flow
 .58 Hydrodynamics of submerged or floating bodies in a moving liquid
 .59 Wave motion. Waves.
 532.6 **Surface phenomena. Surface tension. Thin films, bubbles, etc. Capillarity**
 532.7 **Kinetic theory of liquids. Diffusion, etc.**
 .71 Osmosis
 .73 Solution and solubility. Cf. 541.8
 .78 Crystallization. Cf. 548.5
 533 **GAS MECHANICS. AEROMECHANICS¹**
Information common to liquids and gases at 532
 .1 Properties: density, diffusion, viscosity
 .2 Elasticity, compressibility, liquefaction
 .27 Mixtures: humidity; hygrometry, katharometry. Cf. 551.57
 .4 Barometry [1958]: *see* 531.78; 551.508.4
 533.5 **Rarefied gases. Vacuum physics** Cf. 621.52
 533.6 **Aerodynamics¹**
 .01 Flow velocity. Heat transfer. Compressibility. Dynamics, flight, performance, etc.
 .013 Lift. Drag. Stability. Aeroelasticity
 Flight. Climb. Dive. Stall. Stresses
 .015 Performance. Speed. Rate of climb.
 .04 Aerofoil characteristics. Airflow variables
 .07 Testing techniques: wind tunnels, tanks, etc.
 .61/.64 Aerostats (lighter-than-air). Cf. 629.132
 .65 Aerodynes (heavier-than-air). Cf. 629.135
 .652/.653 Landplanes, convertiplanes. Seaplanes
 .661 Rotorcraft, helicopters, autogyros
 .662 Airscrews, propellers, fans, rotors
 .666 Non-powered: parachutes, kites, gliders
 .68 Study of bodies in relation to ground or water
 .69 Aircraft elements. Aerofoils (with .01 and .04)
 .691 Aerofoils, bodies, etc.; *use* 533.69.0 and .692/.696
 .692 Wing sections (diamond, flat, wedge, etc.)
 .693 Complete wings. Planforms (delta, ring, etc.)
 .694 High-lift devices. Controls
 .695 Interference between parts. Cf. 533.68
 .696 Bodies: spheres, cylinders, etc. (*also* A/Z)
 .697 Internal aerodynamics: intakes, ducts, nozzles
 533.7 **Kinetic theory of gases. Continuity of state¹**

¹ Plasma physics to have new number 533.9 and Magnetohydrodynamics 538.4.

- 534 **VIBRATIONS. ACOUSTICS. SOUND**
Class here information on all types of mechanical or material vibrations
 -6 Subsonic vibrations (ultra long)
 -8 Supersonic vibrations (ultra short)
 .01 Theory of vibrations
 .011 Transverse waves
 .012 Longitudinal waves
 .013 Torsion waves
 .1 Vibration of bodies. Excitation
 .2 Propagation, transmission of vibrations
 .22 Velocity of vibrations, of sound
 .23 Acoustic field. Radiators, etc.
 .24 Reflection. Echo. Resonance phenomena
 .25/.27 Refraction. Diffraction. Polarization
 .28 Damping, absorption, etc.
 .3 Musical sounds and characteristic vibrations
 .32 Sound: frequency and pitch; amplitude and timbre (quality), etc. Cf. 534.6; 534.8
 .37 Damping [1957]: *see* 534.28
 .4 Analysis and synthesis of vibrations.
 Sound analysis. Resonance methods
 .41 Qualitative analysis, e.g. by stroboscopy
 .44 Quantitative analysis of vibrations
 .5 Compounding, composition of vibrations
 .51 Interference. Beats
 .6 Acoustical measurements. Cf. 534.3
 .61 Intensity, pressure, level, amplitude
 .63 Frequency
 .64 Acoustical impedance (earthquakes, shocks or tremors, seismographs). Cf. 550.34
 .7 Physiological acoustics. Cf. 612.85
 534.8 **Applications of acoustics.** Cf. 681.8
 .83 Unwanted vibrations. Noise: abatement, etc.
 .84 Architectural acoustics
 .85 Acoustics of sound recording and reproducing
 .86 Electro-acoustic problems, transduction, etc. (radio broadcasting and sound recording)
 .87 Acoustic signalling
 .88 Sound-ranging. Direction-finding
 535 **OPTICS. LIGHT**
 -1 Infra-red (and longer wave) rays
 -2 Visible light rays (spectrum)
 -21/-23 Red. Orange. Yellow
 -25/-28 Green. Blue. Indigo. Violet
 -291/-293 White. Grey. Black
 -3 Ultra-violet (and shorter wave) rays
 -92 Reflected light
 -94 Refracted light
 355.1 **Theory of light**
 .11 Emission theory
 .12 Wave theory
 .13 Electromagnetic theory
 .14 Quantum theory. Cf. 530.145, 539.122
 355.2 **Light radiation. Energy. Photometry**
 .21 Effects of radiation
 .211 Thermal effect
 .212 Luminous effect
 .214 Mechanical effect. Radiation pressure. Radiometry. Photophoresis
 .215 Electrical, photo-electrical effects. Cf. 621.38
 .217 Chemical, actinic effects. Cf. 541.14
 .218 Magnetic effect
 .22 Velocity of light
 .23 Energy and spectral distribution. Black body radiation (Kirchhoff, Stefan, Wien)

- 535.24 Intensity of light. Photometry
.242 Subjective photometry. Visual photometers
.247 Objective photometry; chemical, thermo-
photo-electric, etc.
- 535.3 Transmission. Absorption. Emission
.31 Geometrical optics. Reflection. Refraction
.311 Rectilinear propagation. Shadow
.312 Reflection. Plane mirrors
.313 Spherical, curved mirrors
.314 Refraction. *Cf.* 535.32
.315 Prisms
.316 Thin lenses. Astigmatic lenses
.317 Thick lenses. Optical systems
.318 Refracting/reflecting, catadioptric systems
.313 Testing for optical homogeneity, parallelism
of plates
.32 Refraction: measurement, indices.
Refractometry. Dispersion. *Cf.* 535.58
.322 Measuring instruments
.329 Anomalous dispersion
.33 Spectra in general. Emission spectra
.34 Absorption. Absorption spectra. *Cf.* 543.42
.345 Transparency. Light filters
.347 Dichroism. Pleochroism
.348 Pleochroic haloes
.35 Excitation. Extinction
.36 Diffusion, lustre, etc. *Cf.* 535.4; 535.58
.37 Luminescence. Fluorescence. Phosphorescence
.375 Scattering. Raman effect. *Cf.* 537.531.8
.39 Relations between refraction, absorption, reflec-
tion. Vitreous, metallic reflection
- 535.4 Interference. Diffraction, etc. *Cf.* 535.36
.41 Interference. Interferometry(-ers)
.42 Diffraction. Diffraction gratings
.43 Scattering. Tyndall effect. Turbidity, etc.
.44 Special effects in crystals and other regular
structures. Opalescence
- 535.5 Polarization. Double refraction, etc.
.51 Polarization
.52 Optical surfaces and axes
.54 Chromatic polarization
.56 Rotation. Polarimeters
.58 Dispersion in anisotropic bodies. *Cf.* 535.32
- 535.6 Colours and their properties. *By -2 at 535*
.08 Colorimetry. *Cf.* 545.81
.61 Generalities: hue, brightness, saturation, etc.
.62 Composition of colours. Colour mixing
.64 Colour systems. Theories of colour
.65 Colour measurement: methods, apparatus
.66 Colours of bodies. Covering power
.67 Colour rendering and fidelity. *Cf.* 778.68
.68 External influences. Colour fastness
* 535.7 Physiological optics; [1957] *see* 612.84 *
- 535.8 Applications. Optical instruments
.81 Instruments: theory, components, performance
.82 Microscopy and microscopes
.821 Simple magnifiers. Lenses. Prisms, etc.
.822 Microscopes. Compound microscopes
.83 Eyeglasses. Binoculars. Telescopes. *Cf.* 681.4
.853 Spectral apparatus: spectroscopes, spectro-
meters, spectrographs, etc. *Cf.* 543.42
.854 Interference apparatus
.86 Camera lucida. Endoscopes. Periscopes
.87 Mirrors. Reflectors. *Cf.* 628.946
.88 Projection apparatus. Collimators. *Cf.* 778.2
- 536 HEAT. THERMODYNAMICS
536.1 General theory: temperature, distribution, heat
potential, quantity
536.2 Heat transference, transmission
.21 Conduction (in solids). Heat insulating power
.22 In liquids
.23 In gases
.24 Heat transfer, exchange
.25 Convection
536.3 Effect of bodies on heat and heat radiation
:535.3... Reflection, refraction, absorption, etc.
.33 Heating and cooling by radiation. *Cf.* 535.2
.35 Diathermancy, heat transmission properties
.37 Various thermal effects of physical origin
536.4 Action of heat upon bodies
.41 Change of volume. Expansion. Contraction
.42 Change of state, transformations
.421 Solid-to-liquid (and vice versa). Fusion,
solidification. Melting and freezing points
.422 Solid-to-gas (and vice versa). Sublimation
.423 Liquid-to-gas (and vice versa). Vaporiza-
tion and condensation. Boiling point.
Dew point
.424 Allotropic transformation
.425 Phase transformations (heterogeneous bodies)
.44 Critical points
.45 High temperature phenomena and production
.46 Combustion. Flames, (in)flammability.
Cf. 543.87
.48 Low temperature phenomena and production
.49 Other effects of heat
536.5 Temperature: measurement, control.
Thermometry
.081 Temperature units and scales
.51 Thermometry and thermometers
.52 Pyrometry. Optical pyrometers
.53 Electrical methods: resistance thermometers,
thermo-, photo-electric pyrometers. *Cf.* 537.32
.54 Calorimetric methods
.55 Other methods of thermometry
.58 Thermoregulation. Thermostats.
Maintenance of constant temperature
536.6 Heat quantity: measurement. Calorimetry
.081 Units, constants: B.T.U., calories
.62 Methods
.63 Specific heat, heat capacity
.65 Latent heat
.66 Heat of reaction, heat of formation
.662 Heat of combustion, heat value
.68 Determination of thermal requirements
536.7 Thermodynamics. Heat energy
.71 Change of state. Equations
.711 Adiabatic
.712 Isothermal

67 Industries and Crafts based on Processable Materials

- 67...01 Properties, defects, etc. *As* 66.01
 ...02 Manufacturing processes
 ...03/04 Raw materials. Accessories, additions
 ...05 Plant, machinery, tools, etc.
 ...06 Applications. Finished products
 ...08 By-products. Co-products
- 671 PRECIOUS METAL, GEM INDUSTRIES. JEWELLERY. TRINKETS
- 671.1 Gold and silver work. Jewellery. *Cf.* 681.1; 739
- .11 Goldsmithery. Silversmithery
 .12 Jewels: brooches, bracelets, rings, etc.
 .13 Useful articles: purses, (watch) chains, nibs, penholders, pencils. *Cf.* 672.86; 686.863
 .14 Rolled gold and silver, gold- and silver-plated articles. *Cf.* 686.4
 .15 Precious stones. Gemstones. Pearl-setting, etc.
 .152 Diamond industry. *Cf.* 679.87
 .16 Artificial gemstones. Imitation pearls, etc.
- 671.2 Small fancy ornaments. Trinkets, smokers' requisites, etc. *Cf.* 666.189; 688.9; 739.8
- 671.4 Coins and medals: minting, striking. *Cf.* 737
- 672 IRON AND STEEL GOODS GENERALLY. *Cf.* 669.1; 683; 739.4
- .1 Cast iron and steel goods: fire-grates, (lamp)posts, etc. *Cf.* 621.74
 .3 Wrought iron and forged steel goods. *Cf.* 621.73
 .4 Tin-ware. Tin-plate goods. *Cf.* 673.8
 .46 Canned food tins. *Cf.* 621.798.14; 664.8.036
 .466 Tin openers
 .6 Chains. Anchors. *Cf.* 621.86; 629.1.015
- 672.7 Cutlery. Spoons and forks. *Cf.* 642.73
- .71 Cutlery. Knives. Scissors. Razors
 .712 Pocket-knives
 .713 Table- and kitchen-knives
 .714 Scissors
 .715 Razors and razor-blades
 .73 Sharpeners, hones, strops. *Cf.* 621.92
 .76 Spoons and forks
- 672.8 Small metal articles
- .81 Pins
 .818 Safety pins
 .82 Needles (sewing, knitting, etc.)
 .83 Fasteners (hook-, eye-, press-stud, etc.)
 .836/.837 Buckles. Zip fasteners
 .86 Pen nibs. *Cf.* 671.13; 686.863
 .87 Metal buttons. *Cf.* 688.2
 .88 Metal fixings. *As* 621.88, *e.g.*
 .886.2 Nails
- 672.9 Various iron and steel goods: umbrella-frames, boxes, safes, furniture, etc. *By* :645.4, *etc.*
- 673 NON-FERROUS METAL GOODS. *Cf.* 669.2/.8; 683; 739.5
- .1 Copper-, brass- and bronze-ware generally
 .2 Repoussé copper- and brass-ware
 .3 Copper foundry work. Cast bronze-ware
 .4 Electroplated products. *Cf.* 621.357
 .5 Bells. Bell founding. *Cf.* 681.819, 789.5
 .6 Pipe closures, valves, taps. *As or by* :621.646
- 673.7 Other (pipe) fittings. *As or by* :621.647
 .8 Objects of tin, lead, zinc, light-metals, etc.
 .83 Tubes and tubing
- 674 TIMBER AND WOODWORK INDUSTRY. *Cf.* 634.9; 694
- 4 Planks, boards, sections. *As* 621—4
 .02 Wood-working operations
 .028 Joining and joints. Bending. *Cf.* 674.76
 .03 Kinds of wood or timber. *Cf.* 634.9; 691.11
 .04 Seasoning, impregnation and other treatments
 .05 Tools, machinery, equipment. *By* :621.88/.9
 .06 Applications. Products
 .07 Surface treatment of wood. *By* :667.6, *etc.*
 .08 By-products. Waste
 .09 Conversion to sawn timber. Saw-mills, *etc.* (:621—9)
- 674.1/.7 Woodwork and woodworking trades
- .1 Carpentry (builders' and ships'). *Cf.* 694
 .2 Joinery: fixtures and fittings
 .21 Builders' joinery. *Cf.* 694.6
 .23 Furniture joinery. *Cf.* 645.4, 684.5
 .24 Marquetry, inlay work. *Cf.* 684.6; 69.025.3
 .243 Plywood, block-board, *etc.*
 .25 Vehicle joinery. *Cf.* 684.2
 .26 Lattice-work: fences, palings, trellis, lathing
 .3 Cartwrighting. Wheelwrighting. *Cf.* 684.2
 .4 Cooperage (barrels, casks, kegs)
 .5 Small wooden articles. Carved objects
 .52 Household and kitchen articles
 .56 Wooden toys (carved). *Cf.* 688.7
 .6 Box-, chest-, packing-case, crate-making. *Cf.* 621.798; 677.54
 .7 Rounded objects: masts, poles, sticks, handles, furniture parts, *etc.* *Cf.* 621.941
 .76 Bent-wood objects and parts
 .77 Turnery proper: furniture legs, shafts, *etc.*
- 674.8 Wood waste and by-products. Cork. *Cf.* 676.15
- .81 Compressed wood. Artificial wood
 .82 Wood wool, shavings, sawdust
 .83 Cork industry
 .84 Artificial cork. Cork substitutes. *Cf.* 69.025.3
 .88 Peat litter. Peat slabs, *etc.* *Cf.* 662.73; 677.194
- 675 LEATHER INDUSTRY. Tanning and dressing. Skins, hides, pelts. *Cf.* 685
- .02 Processing. Tanning and dressing
 .021 Preliminary treatment. Fleshing, *etc.*
 .022 Extraction of tanning materials. Leaching
 .023 Soaking, steeping, bating, liming, scudding
 .024 Tanning (vegetable, mineral). Tawing
 .025 Mechanical treatment. Drying. Shaving
 .026 Finishing. Dressing. Dyeing, staining. Currying, stuffing. Glazing. Cutting
 .03 Leathers, hides, skins. *By* :636/639
 .04 Auxiliary materials: tanning agents, oils, *etc.*
 .05 Tools and equipment. *As* 675.02, *e.g.*
 .054 Tanners' pits. Handlers. Layers
 .055 Machines for shaving, drumming, *etc.*
 .08 By-products: degrass, *etc.*
- 675.1/.7 Kinds of leather and leatherwork
- .1 Hungarian and other thick (heavy) leathers
 .2 Tawed, soft light (alum) leathers

- 675.3 Morocco and imitation Morocco leathers
 - .41 Chamois or wash-leather
 - .42 Buff leather
 - .43 Parchment. Vellum. *Cf.* 686.1
 - .6 Pelts and furriery. *Cf.* 687.8
 - .7 Special forms of leather. Belting. Patent and ornamental leathers
- 675.8 Leather industry wastes and by-products: hair, bristle, feathers, etc. *Cf.* 677.3
 - .85 Gut-dressing. Catgut. Goldbeaters skin, etc.
 - .86 Bone, ivory, horn, baleen, (tortoise)shell
- 675.9 Leather dyeing and other processes. *Cf.* 667.0/.3
- 676 PAPER AND PULP INDUSTRIES
 - .017 Testing. Properties and defects. Strength
 - 676.1 Paper pulp manufacture
 - .02 Pulp preparation, processing, treatment
 - .021 Mechanical: sorting, reduction, washing
 - .022 Chemical: cooking, halfstuff preparation
 - .023 Finishing: bleaching, dyeing, etc.
 - .03 Raw materials. *By* :633.58, etc.
 - .04 Accessory materials
 - .05 Plant, machinery: screens, digesters, breakers, beaters, hollanders, perfecting engines (refiners), etc. *As* 676.1.02
 - .06 Pulps and pulp products. *As* 676.1.02
 - 676.11 Pulp from rags and other textile wastes
 - .12 Pulp from used and waste papers
 - .13 Alfalfa (lucerne) and Esparto pulp
 - .14 Straw pulp
 - .15 Mechanical wood pulp
 - .16 Chemical wood pulp. Cellulose
 - .17 Various grass pulps
 - .18 Other fibre pulps
 - .19 Mixtures. Mixed fibre pulps
 - 676.2 Paper and board manufacture. Papermaking
 - .02 Papermaking processes, operations. *As* .05
 - .05 Plant, machinery, tools, equipment
 - .051 Handmaking: chests, moulds, deckles, felts
 - .052 Paper machines: fourdriniers, cylinders, etc.
 - .053 Dampers, coating machines, calenders, cutters
 - 676.3 Writing, printing and drawing papers
 - .31 Writing, typing paper. *Cf.* 651.2; 686.8
 - .32 Bank-and-bond (currency), watermark papers
 - .33 Printing papers. Printings
 - .34 "Art" and "vellum" (surface-coated) papers
 - .35/.36 Drawing paper. Tracing, blueprint papers
 - .37 Reproducing, transfer and carbon papers
 - .39 Other papers. Blotting paper
 - 676.4 Papers for industrial and technical uses: filter-, cigarette-, wrapping-, insulating-, abrasive-papers, etc. *By* :621.315.61; 621.921, etc.
 - .43 Tissue paper. Crêpe papers
 - .44 Parchment(ized) paper: brown, corrugated, etc.
 - .48 Treated, impregnated papers. *Cf.* 691.14
 - 676.5 Wallpapers. Coloured, fancy papers. *Cf.* 698
 - 676.6 Cardboards, millboards, boxboard, etc.
 - .61 According to pulps used, e.g. strawboards
 - .62 According to quality, e.g. fine cardboard
 - .63 According to structure, triplex, multiplex, etc.

- 676.631 Pulp boards
- .633 Pasteboards
- 676.7 Moulded, compressed, corrugated boards. Fibreboard, hardboard, pressboard. *Cf.* 691.14
- 676.8 Paper and (card)board wares. *Cf.* 686.8
 - .81 Cut paper or thin board articles
 - .811 Labels, tags (gummed or tie-on)
 - .812 Paper shavings. Confetti, etc.
 - .813 Cards. Postcards. Visiting cards, etc.
 - .814 Playing cards. *Cf.* 685.81; 795.4
 - .816 Strip, tape (gummed, blank): reels, streamers
 - .818 Blanks for tickets, receipts, stamps, etc.
 - .82 Flat, folded articles (gummed or not)
 - .821 Paper bags or carriers
 - .822 Envelopes. Letter-cards
 - .823 Folders (manila, etc.). Portfolios
 - .826 Wrappers. *Cf.* 676.811
 - .828 Paper beakers, cups. *Cf.* 676.84
 - .83 Wound and glued paper tubes, spools, etc.
 - .84 Cardboard boxes, cartons, holders, etc.
 - .86 Papier mâché articles
- 677 TEXTILE AND CORDAGE INDUSTRIES
 - .01 Generalities. Properties and defects. Analysis and testing. Serviceability, etc.
 - .02 Textile processes. *As* 677.05, e.g.
 - .021 Fibre preparation: carding, combing, drawing
 - .022 Spinning, doubling, twisting, cabling
 - .024 Weaving
 - .027 Chemical treatments. *Cf.* 677.8
 - .03 Processing. Raw materials. *Cf.* 633.5
 - .04 Secondary, auxiliary materials: chemical agents
 - .05 Textile machinery and equipment. *Cf.* 677.8.05
 - .051 Fibre-preparing machines: opening, cleaning, scutching, hackling, carding, combing; drawing, slubbing and roving frames
 - .052 Spinning, twisting, doubling machines. Flyer and ring frames. Mules, etc.
 - .053 Winding and packaging machines. Reels, etc.
 - .054 Warping, sizing, weaving machines. Looms
 - .06 Textile products. Fabrics. Cloths
 - .064 Woven fabrics and cloths
 - .066 Special products, flocks, stuffings. *Cf.* 684.7
 - .08 Waste; by-products
 - 677.1 Plant or vegetable fibres in general. Bast fibres
 - .11 Flax: canvas, linen, tarpaulin, sailcloth. *Cf.* 633.52; 677.7
 - .12 Hemp (true hemp)
 - .13 Jute: hessian, cordage, etc. *Cf.* 677.71
 - .14 Woody stem fibres of dicotyledons. Sunn hemp. Java jute, etc.
 - .15 Non-woody stem fibres of dicotyledons
 - .151 China grass (cloth). Ramie
 - .16 Leaf and leaf-sheath fibres of monocotyledons
 - .161 Manila hemp and banana fibres
 - .162 Agave fibres. Sisal, etc.
 - .17 Stalk or stem fibres: grasses, rushes, etc.
 - .18 Fruit fibres of monocotyledons
 - .181 Coconut fibres. Coir
 - .19 Bark, moss, fern fibres. Pine needles, etc.
 - .193 Aquatic plant and seaweed fibres
 - .194 Peat fibres
 - 677.2 Plant or vegetable (seed) hairs
 - .21 Cotton. Mercerized cotton, etc.
 - .22 Various seed hairs
 - .23 Fruit hairs. Kapok (stuffings, etc.). *Cf.* 684.7

- 677.3 **Animal fibres, hairs, etc.** Cf. 636/639
- .31 Wool, esp. sheep wool. Cf. 636.3
 - .312 Fleece wool: lamb's wool, merino, etc.
 - .318 Recovered wool: shoddy, mungo, noil
 - .32 Alpaca, vicuna, llama wool or hair
 - .33 Goat hair and wool: Cashmere, mohair
 - .34/.35 Camel hair. Other hair, fur, bristle
 - .36 Other animal fibres: [1959] *see* 677.39
 - .37 Silk (natural). Cf. 638 2/.54, etc.
 - .371 True (silkworm) silk (*Bombyx* species)
 - .372/.373 Tussah. Other wild silkworm silks
 - * .38 Recovered wool: [1959] *see* 677.318
 - .39 Other animal fibres, feathers, gut, etc.
By : 637.6 and cf. 675.8
- 677.4 **Man-made fibres.** Cf. 678.5 *et seq.*
- * .41/.44 Natural silks: [1959] *see* 677.37
 - .46 Cellulosic and similar fibres. Rayon
 - .461/.463 Nitrate. Cuprammonium. Viscose
 - .464/.465 Acetate. Other esters
 - .466/.467 Ethers. Other cellulose
 - .469 Other polyoses: polyuronide, alginate
 - .47 Protein and other N-containing fibres
 - .494 Fibres from organic synthetics. *As* 678,
e.g. .675 Polyamide, nylon fibres
- 677.5 **Mineral and other material (plaiting, etc.)**
- .51 Natural mineral fibres, e.g. asbestos
 - .52 Artificial mineral fibres, e.g. glass
 - .53 Metal thread, filaments. By : 669
 - .54 Straw, esparto, rush and reed, bamboo, bast
 - .55/.57 Rubber and elastic material. Paper thread
- 677.6 **Special fabrics. Drapery, etc.** Cf. 684.7
- .61/.62 Figured and pile fabrics. Raised fabrics
 - .63 Felts (pressed, unwoven material)
 - .64 Carpeting, rug and tapestry work. Cf. 746
 - .65 Openwork: gauze, lace, tulle
 - .66 Knitted, crochet, tatted work. Netting
 - .67 Tubular fabrics
- 677.7 **Cordage. Trimmings. Embroidery work**
- .08 Knotting, knots, splicing, etc.
 - .71 Cordage: rope, twine, string. By : 677.1/.5
 - .72/.73 Wire rope. Conductor cable. Cf. 621.315.2
 - .74 Gut-string and similar cording
 - .75 Shoe laces. Ribbon and tape. Webbing
 - .76/.77 Passementerie. Embroidery work. Cf. 746
- 677.8 **Textile dyeing, printing and finishing**
- .05 Special machines and equipment (*not as* 677.05)
 - .81 Unit processes: control, damping, drying
 - .82 Preparation: inspection, singeing, etc.
 - .825 Cleaning, scouring, etc. Cf. 648.1/.28
 - .826/7 Bleaching. Blueing, optical whitening
 - .84 Dyeing. Cf. 667.2 and 661.8
 - .85 Printing (block, screen, roller)
 - .86 Finishing: proofing, coating, bonding
 - .861 Mechanical: fulling, decatizing, etc.
 - .3 Raising, cropping, brushing, beating
 - .5 Calendering, embossing, pressing, boarding
 - .8 Shrinking (and stretching)
 - .862 Chemical: mercerizing, proofing, etc.
 - .2 Altering chemical and dyeing properties
 - .3 Handle, weight, appearance. Mercerizing
 - .5 Resilience, resistance, wear improving
 - .865 Coating, impregnating (oil, plastics, etc.)
 - .866 Combining, bonding (rubber, plastics, etc.)
 - .88 Final check, measuring, lapping, packaging
 - * 677.9 Wadding, flocks, stuffings: [1959] *see* 677.066

- 678 **MACROMOLECULAR MATERIALS.
RUBBERS AND PLASTICS**
- 1 State and composition of specific polymers
 - 13 Co-polymers. Cf. 678.7
 - 4 Products: form and shape. *As* 621-4
 - 9 Derivatives. *Broadly as* 66.09
- * 678.01 Properties. Testing. By : 53, 54, 620.1
- .019 Defects. Resistance to attack. *As* 620.19
- 678.02 Manufacturing processes. By : 66.09
- .021 Pre-coagulation, latex treatment, coagulation
 - .022 Treatment of coagulates
 - .023 Compounding, grinding, mixing, blending
 - .024 Conversion into preforms, blanks, etc.
 - .026 Impregnating, coating other materials
 - .027 Forming: extruding, press moulding, etc.
 - .028 Curing, vulcanizing. Reclaiming. Cf. 678.46
 - .029 Machining. Fabricating. Finishing, etc.
- 678.03 Raw and semi-processed materials
- .031 Latex (crude latex)
 - .032 Coagulates, block, crêpe, sheet, etc.
 - .033 Compounded materials, e.g. moulding powders
 - .034 Preforms, e.g. pellets, tablets, chips
- 678.04 Accessory materials. Additions. By : 66.0
- .043 Vulcanizing agents. Cf. 678.028
 - .044 Accelerators, catalysts. Cf. 66.097
 - .046 Fillers: reclaimed rubber, factice, etc.
 - .047 Colouring materials. Dyes, pigments
 - .049 Softeners. Wetting agents. Lubricants, etc.
- 678.05 Plant, machinery, equipment. By : 621.7/.9
- .053 Grinding and mixing machinery, blenders
 - .054 Preforming plant, e.g. pill machines
 - .055 Heating and drying plant
 - .056 Dipping and spraying plant
 - .057 Forming, extruding and moulding machines
 - .058 Vulcanization, curing, reclaiming plant
 - .059 Machining, fabricating, finishing plant
- 678.06 Applications. Finished products, wares
- .061 Latex products, compositions, mixings
 - .062 Uncured, unvulcanized products.
Crude rubber compositions, mixings, etc.
 - .063 Cured, vulcanized products
 - * .064 Hardened materials: *see* 678.077
 - .066 Impregnated, coated, proofed goods
- 678.07 Materials according to special characteristics
- .072 Thermosetting materials. Cf. 678.6
 - .073 Thermoplastic materials. Cf. 678.5/.7
 - .074 Elastomers
 - .075 Plastomers
 - .076 Soft macromolecular materials
 - .077 Hard or rigid macromolecular materials
- 678.4 **Rubbers and natural macromolecules
(containing carbon, hydrogen only).** Cf. 678.7
- .43 Low-sulphur-content derivatives.
Soft (vulcanized) Hevea rubber
 - .44 High-sulphur-content derivatives.
Hard rubber. Ebonite. Vulcanite
 - .46 Regenerated sulphur derivatives.
Reclaimed rubber. Cf. 678.028; 678.046
 - .47 Non-vulcanized derivatives of Hevea rubber.
Cyclo-rubbers, halogenated rubbers, etc.
 - .48 Gutta-percha. Balata. Chicle. Guayule
 - .481 Gutta-percha. *As* 678.43/.47
 - .482 Balata. *As* 678.43/.47
 - .483 Chicle. *As* 678.43/.47
 - .484 Guayule. *As* 678.43/.47

- 678.5 **Plastics, especially semi-synthetic plastics (based on cellulose, proteins, etc.)**
- .54 Plastics based on cellulose or derivatives. *Cf.* 661.728; 677.46
 - .542 Based on cellulose: viscose, cuprammonium
 - .544 Based on esters: cellulose nitrate, acetate, etc.
 - .546 Based on (single) cellulose ethers
 - .55 Starch-, alginate-, agar-agar-, lignin-base plastics
 - .56 Plastics based on proteins or other natural nitrogenous compounds
 - .565 Casein plastics, e.g. casein-formaldehyde
 - .58 Plastics based on oils and waxes, bitumens and natural resins. *By* :665; 668.4
- 678.6 **Synthetic polycondensates: resins, fibres, etc.**
Compounds by '1/.7... (full edition)
- .62 Polycondensates synthesized from -CHO groups, Aldehyde polycondensates, resins
 - .63 Polycondensates synthesized from cyclic -OH
 - .632 Aryl -OH with -CHO. Phenoplasts. Phenolics
 - .64 Polycondensates synthesized from acyclic -OH
 - .644 -OH with -OH, e.g. diol-diol (alkylene oxide)
 - .65 Polycondensates synthesized from =NH groups
 - .652 =NH with -CHO. Aminoplasts
 - .66 Polycondensates from -N=C=O groups
 - .664 -N=C=O with -OH. Polyurethanes
 - .67 Polycondensates synthesized from -COOH groups
 - .674 -COOH with -OH. Polyester or alkyd polycondensates, resins. Glyptals
 - .675 -COOH with =NH. Acid-amine, polyamide and sulphonamide polycondensates. Nylon
 - .68 Polycondensates synthesized from halogen, =CO (ketone), sulphur, $\equiv\text{CH}$ or other groups
 - .684 Polysulphide polycondensates. Thiokol
- 678.7 **Synthetic polymerizates: rubbers, resins, etc.**
- .71 Hydrocarbon polymerizates generally
- 678.74 **Monolenic (one reactive =C)**
- .742 Aliphatic hydrocarbon polymerizates: polythene, polypropene, polybutene
 - .743 Halide polymerizates (vinyl, vinylidene, allyl): PVF, PVC, etc. Tetrahalo-olefine polymers
 - .744 Oxygen-containing polymerizates: acrylic, methacrylic polymers; vinyl and allyl esters, ether, alcohol (PVA) polymers, etc.
- 678.745 **Aliphatic polymerizates containing N, S, P, etc.**
Amine, imine, cyanide or nitrile polymerizates. Thio-ether, thiol, oxyhalo, amide polymers
- .746 **Aromatic polymerizates without reactive =C in the ring(s).** Hydrocarbon, O-, N- and S-containing: polystyrene, thio... polymers, etc.
- .747 **Aromatic polymerizates with a reactive =C in at least one ring.** Indene and coumarone
- .76 **Multilenic (two or more reactive =C, or one or more $\equiv\text{C}$).** Diene, halide and O-, N- and S-containing polymerizates
- .762 Diene polymers: polybutadiene, etc.
- .763 Halide polymerizates: polychloroprene (neoprene)
- .769 Polymerizates with $\equiv\text{C}$. Acetylene polymers
- 678.8 **Other macromolecular materials**
- .82 Polymerizate-condensates. Sulphone-olefines
 - .84 Silicon-containing polymers. Silicones
 - .85 Phosphorus-containing polymers
 - .86 Polymers from other inorganic elements. *As* 546
- 679 **INDUSTRIES BASED ON VARIOUS PROCESSABLE MATERIALS**
- *679.1/.4 Amber, coral, corozo, etc.: *see* 679.91/.94
 - *.5 Plastics: *see* 678, particularly 678.5/.8

- .02 Processes. Cutting. Dressing, etc.
 - .05 Tools and machinery for stone dressing
 - .06 Stone products, articles, objects. *By* -4 or :
 - .85 Natural building stone. *As* 553.5 and 622.35
 - .86 Non-precious minerals. *As* 553.6 and 622.36, e.g.
 - .867 Talc. Asbestos. Mica. Vermiculite, etc.
 - .87 Semi-precious stones. Malachite. Jade, etc.
 - .88 Artificial stone cutting, dressing. *As* 666.8
 - .89 Other stones. Very hard stones. Diamonds, etc.
- 679.9 **VARIOUS PROCESSABLE MATERIALS**
- .91 Amber. Meerscham. Shells
 - .92 Mother-of-pearl
 - .93 Corals (and substitutes). Vegetable opal
 - .94 Corozo. Vegetable ivory. *Cf.* 675.8; 688.1
